

We would like to propose following revision to the proposed change.

1. Standard No.110

a). Add following definition in section S3.

Single-piece wheel means the wheel produced as one piece of material (such as cast or forged aluminum wheel) or the wheel constructed with multi piece of components but all pieces are permanently jointed by welding or other means.

Reason; The word "single-piece wheel" shown on section S4.4.2. does not have clear definition and giving unnecessary confusion in actual business cases. Single-piece wheel should mean wheels other than multi piece rim which user needs to assemble components.

b). Rim marking location in section S4.4.2

The words "outer side" should revised to "weather side"

Reason; The word "outer side" has no definition and confusing word. "weather side" has clear definition and should satisfy the intent of this regulation.

2. Standard No.120

a). Add following definition in section S4.

Single-piece wheel means the wheel produced as one piece of material (such as cast or forged aluminum wheel) or the wheel constructed with multi piece of components but all pieces are permanently jointed by welding or other means.

Reason; Same as the reason stated in 1.a). The word is referred in section S5.2 of this standard.
